

OpenSUSE 12.2 Samba Configuration

The screenshots show a samba configuration after the configuration wizard has been run. The wizard will ask the same questions in a different order.

The network connection for this configuration is NAT. The configuration will work for a bridge connection.

Preuss

12/10/2013

The first step is to login to OpenSUSE. The example uses the KDE environment.

Help | Cancel | **OK**

The short direction is make your Start-Up tab the same configuration as the picture.

These options will start the samba server at boot and open the necessary firewall port(s).
